

DATA RESEARCH & E-COMMERCE DATA MANAGEMENT

Personal Demonstration Project — Nazeha Mosharaf

Objective

Demonstrate a complete workflow covering data collection, web research, extraction, cleaning, formatting, validation, e-commerce product listing, analysis, dashboarding and reporting.

Dataset

1,000 structured demonstration product records with SKU, product name, category, brand, price, stock, rating, reviews, status and source URL.

Workflow

Research → Collection → Extraction → Cleaning → Formatting → Validation → Product Listing → Analysis → Dashboard → Report

Skills Demonstrated

- ✓ Data Collection & Web Research
- ✓ Data Extraction & Cleaning
- ✓ Data Formatting & Validation
- ✓ E-commerce Product Listing
- ✓ Data Analysis & Visualization
- ✓ Dashboard & Reporting

Quality Control

Includes standardized fields, duplicate SKU checks, numeric validation, required-field checks and clickable source URLs.

Deliverables

- Excel workbook with 1,000 records and six sheets
- Dashboard and category analysis
- E-commerce listing-ready sheet
- This PDF case study
- GitHub-ready README

Important: This is a personal demonstration project. The dataset is synthetic and is not presented as paid client work.
